AEI Political Report: How angry?

Courts, Elections, Politics and Public Opinion, Polls

How angry are Americans at Washington? This issue of Political Report looks at levels of public anger over time and particularly going into the 2016 presidential election. With the Supreme Court deliberating controversial cases related to abortion, teachers' unions, and affirmative action, this issue also examines public opinion of the court and the cases at hand.

Clicking anywhere produces pop-up version of app

Goes to Storyline page

Embedded version (mobile)

Back-end abilities

Upload .csv/.xls file

Add chart title, axis names, explanatory text at bottom and link, other notes and labels as needed

“Smooth” charts with lots of data point and modify chart line thickness if needed (to create a consistent look among the charts).

Preview chart in back end

Add “hint”, format text box, place at appropriate place on chart

Embeddable by specific chart, by topic, or just random.

Questions

How do you write an accurate explanatory text, and choose hints, since people disagree on the factors behind trends?

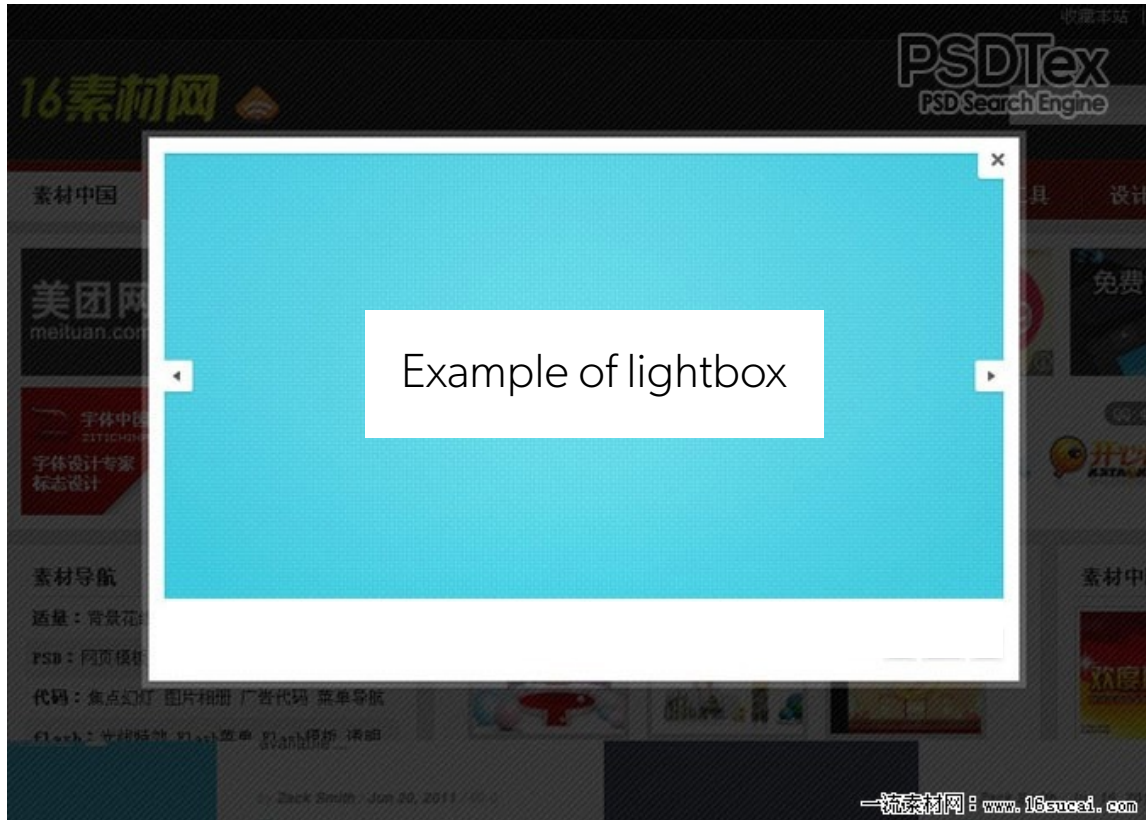

Should you be able to plot two lines on one chart? Sometimes scholars make their point by superimposing two trend lines.

Charts will have different horizontal and vertical scales – which might confuse the user. Is it necessary to draw attention to the change from one chart to the next?

What is the best way to show people how to use it?

How do we describe Storyline? Is it a game? A quiz? A challenge?

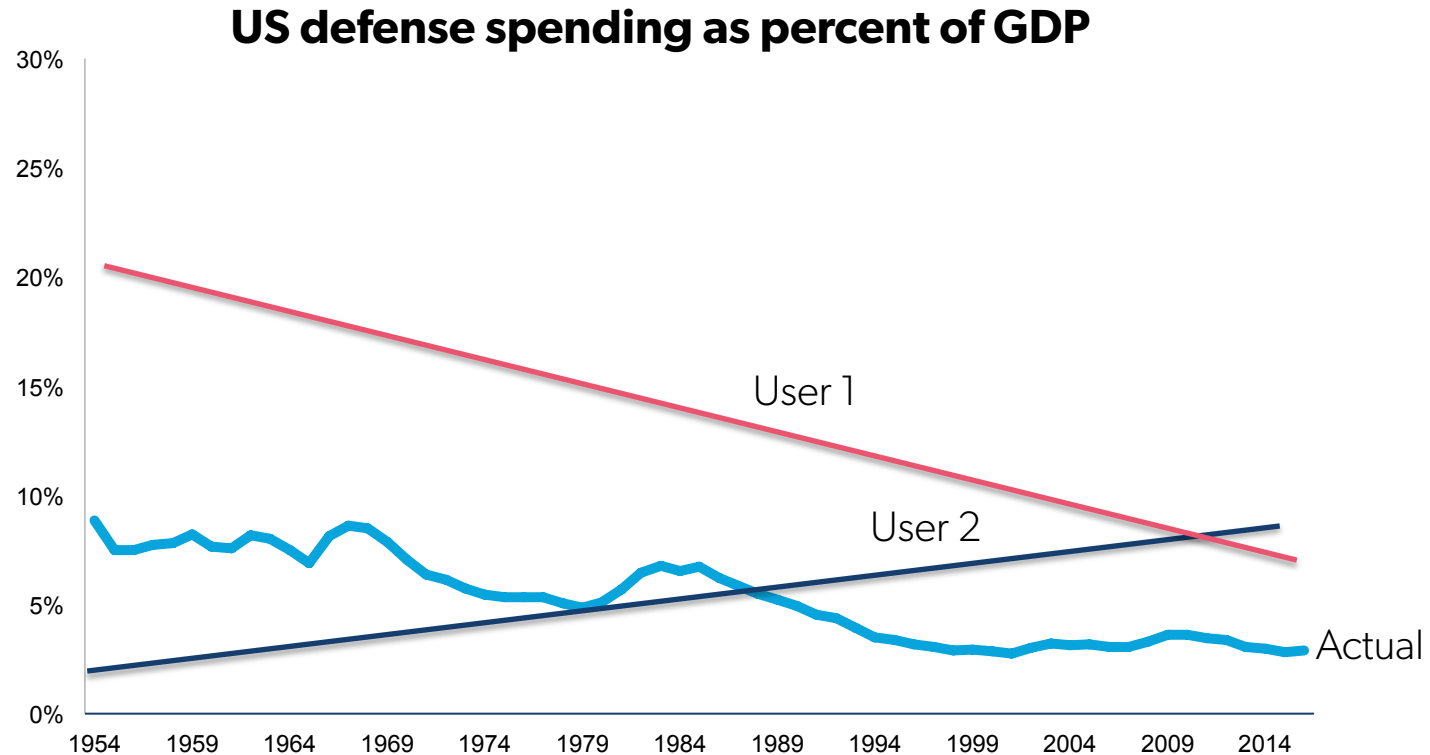

Should embeddable version produce “lightbox” version of app?

Should we try to intentionally make the challenge more difficult by extending the y axis far beyond the maximum y value? For example:

How should you calculate the score? If you just add up the difference between the user line and actual line, User 2 would get a better score, even though he gets the trend wrong.
